Asphyxia &
Trance. —

11

Syncope or fainting

Depends on a diminution or suspension of the motions of the heart.

Its Symptoms are - a sense of languor and anxiety about the heart - giddiness dimness of sight, noise in the ears - quick, weak, or absent pulse - paleness, coldness of the hands & feet - cold sweat on the forehead - ~~a~~ a cessation or suspension of the animal functions of sense & motion. In recovering from Syncope, we sometimes observe great anxiety about the heart - vomiting, & convulsions. &c

Women are more subject to it

✓ They may be known ~~from~~ from
being constant.

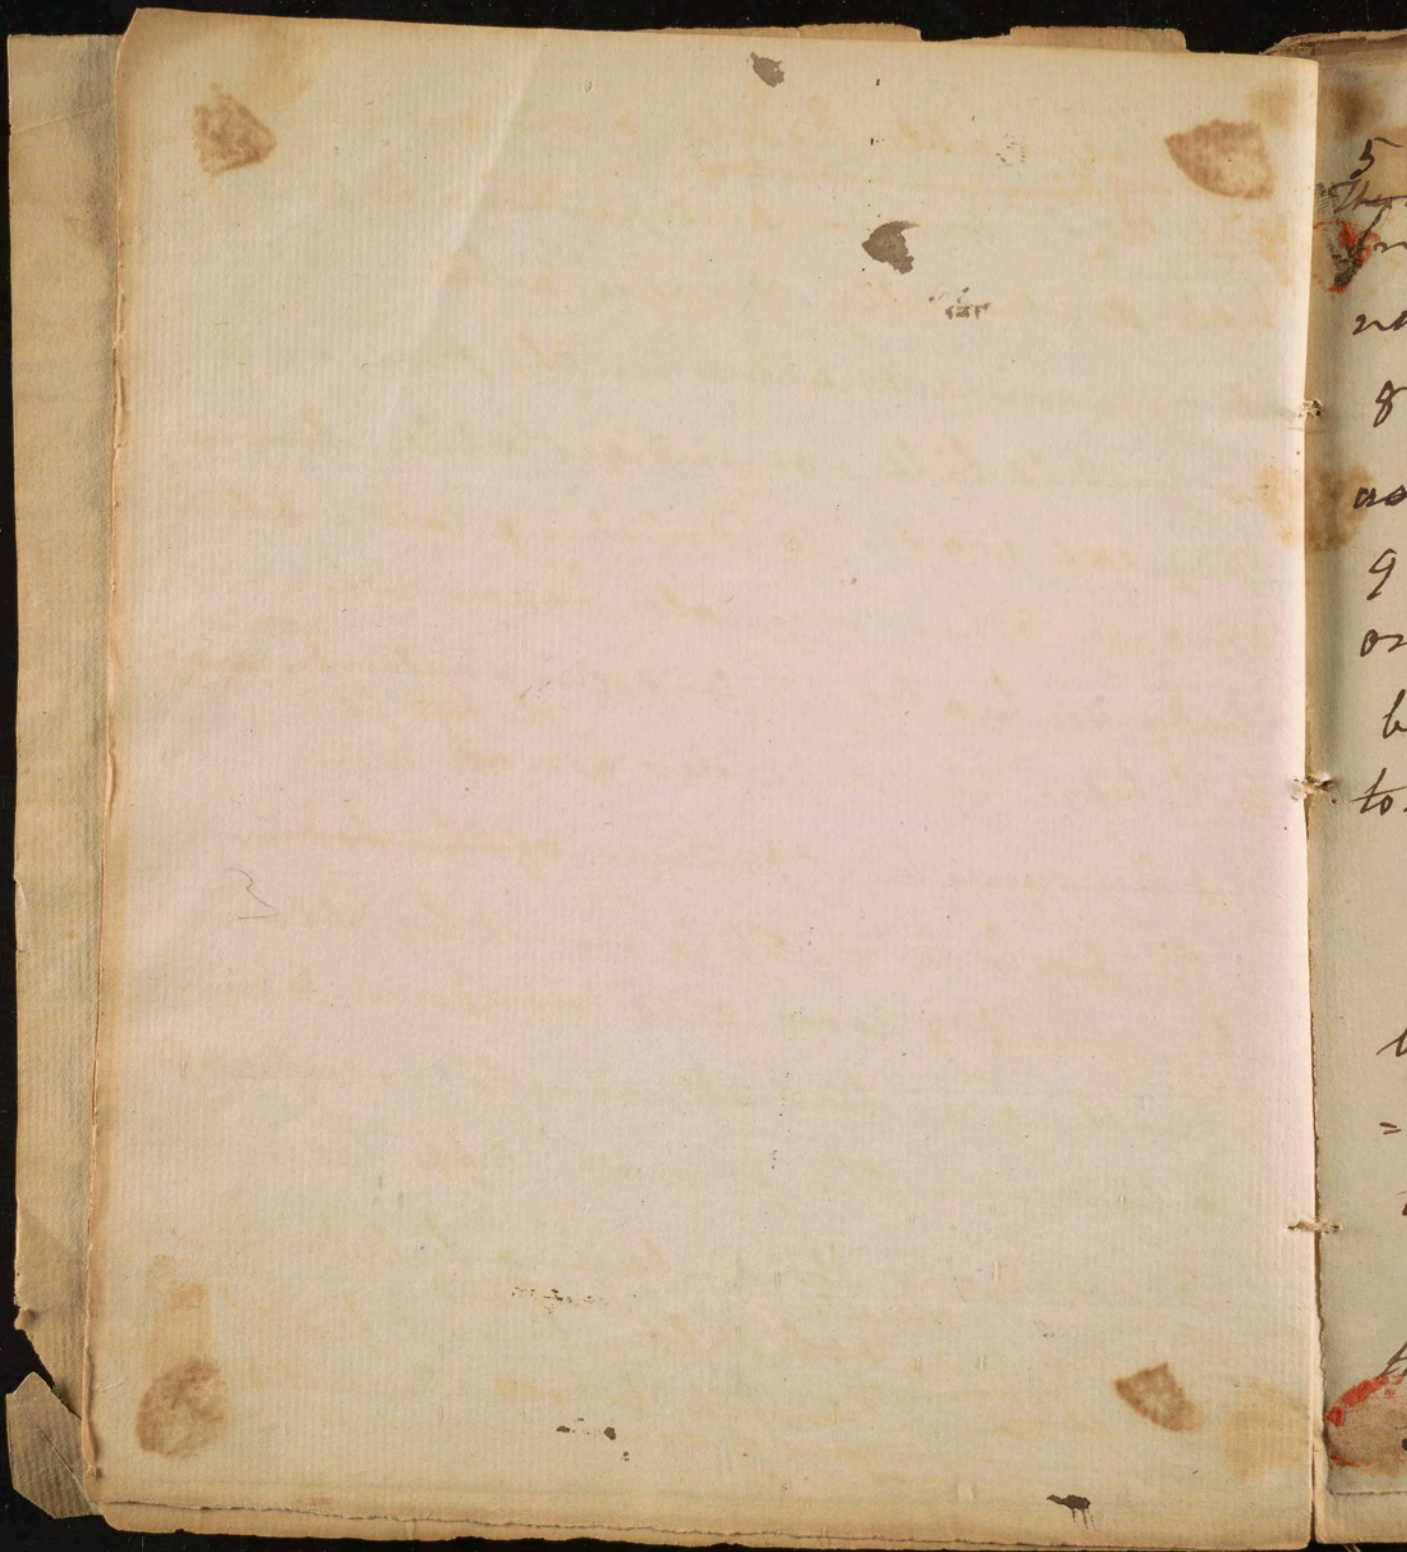

men. It is sometimes hereditary in families. It ~~does~~ does not shorten life.

I knew a man ^{of 90 years of age.} ~~De Bussuville~~ who had ^{been afflicted with it for forty years of his life.} ~~it 40 years. He lived to be 90.~~

Its causes are local & general.

The first depend on aneurism, polypus & Dapny & ossification of the heart, ^{on} or a disease of some of the large ^{blood} vessels which adjoin it. They are for the most part incurable. The general causes are such as act upon the whole system thro' the medium of the brain. They are 1 profuse hemorrhages by ~~act~~ nature or art.

- 2 Great irritation from any cause.
- 3 Sleepless pain, or the Apation of it.
- 4 great emotions or strong passions.

5 disagreeable sights 6 disagreeable
~~the sense of being in it~~
smells. 7 certain antipathies to things
not naturally disagreeable.

8 offensive matters in the stomach
as putrid bile, or indigestible Aliment.

9 great heat, 10 drinking cold water
or any other very cold liquor when the
body is heated. 11 contagious ^{applied} suddenly ~~applied~~
to the body. The Remedies ^{the fit} for ~~it~~ are

1 A recumbent posture of the body.

2 fresh air. This must be obtained
by opening doors, and windows, & per-
mitting as few attendants as possible
to be near the person affected.

3 Applying stimulating Substances to
the nose as ^{volatile} ~~weak~~ salt ^{snuff and} burnt feathers.

~~Snuff~~ ^{the smell of} ~~Solus of the feet~~ ^{the} ~~the~~
~~as a palliative of hysteria performed by the~~
last of those remedies.

4 Frictions to the whole body.
5 Stimulating Glysters & cataplasms
to the feet. —
6 Cold water sprinkled on the face.

These are the Remedies for fainting
from its common Causes. ^{When it is induced by} ~~from~~ heat,
it should be obviated by ^{the} warm Bath
or warm water applied to the hands
or feet. ^{When by} ~~from~~ Cold liquors by Laxatives
in large doses, & frictions. ^{All the} ~~The~~ exciting
causes of syncope ^{should} ~~be~~ be removed as
speedily as possible. ^{When from Contagion,} ~~When from Contagion,~~
^{bleeding is often necessary.} ~~bleeding~~ To obviate the return of ^{the} ~~the~~ disease,
the Remedies should be 1 Exercise, and
2 Cold Bath, & 3 A habit gradually acquired
of resisting its exciting causes. ^{When from} ~~When from~~

✓ It is often difficult to distinguish this apparent
state of death, from that which is real. The
following marks have generally been relied upon
for that purpose. 1 The absence of the ~~death~~ contracted
and pallid face of death. 2 The absence of stiffness in
the limbs. 3 The long Duration of Warmth upon the
body after the death. ~~It is sometimes a transient~~
~~heat which succeeds the coldness of death~~
which arises from its passage from
the internal parts of the body ^{where} it sometimes
exists in an accumulated state in the close of life,
4 Sweats on any part of the body. 5 The discharge
of Urine and Stool. ~~in~~ 6 The appearance of Vapor
upon a looking glass held to the mouth. 7 The
appearance of motion upon the surface of a
tumbler of water placed upon the criciform Cartilage.
Cartilage.

^{Life} ~~most of these symptoms~~ ^{Life} Death may
be ^{suspended} ~~apparent~~, with the absence of all these
symptoms, and ^{death may be} ~~real~~, where most of them
take place.

Asthenia

This Disease consists of two grades - the first is
~~There is a disease~~ ~~to~~ ~~be~~ ~~traced~~ commonly called a

Trance, in which the whole body ~~is~~ apparently
 dies in this grade of Asthenia, ~~except~~ ^{except} the sense of hear-
 ing and ~~except~~ that portion of the brain in which the
 mind resides, and which in consequence thereof

still retains some degree of activity. As the Disease

generally comes on in the close of a fit of

Sickness, at a time when the thoughts are ^{wholly} directed

to the world of Spirits, the mind in a Trance

from the habit it has recently acquired, continues

to dwell upon the scenes of ^{happiness or} misery, ~~or~~

which it had anticipated, and which it ~~now~~

from its debilitated state ^{it now} supposes it to be present.

After such persons recover, they honestly relate

what they have ~~dreamed only~~, ^{genuine}

what they have ~~dreamed only~~, as visions, or

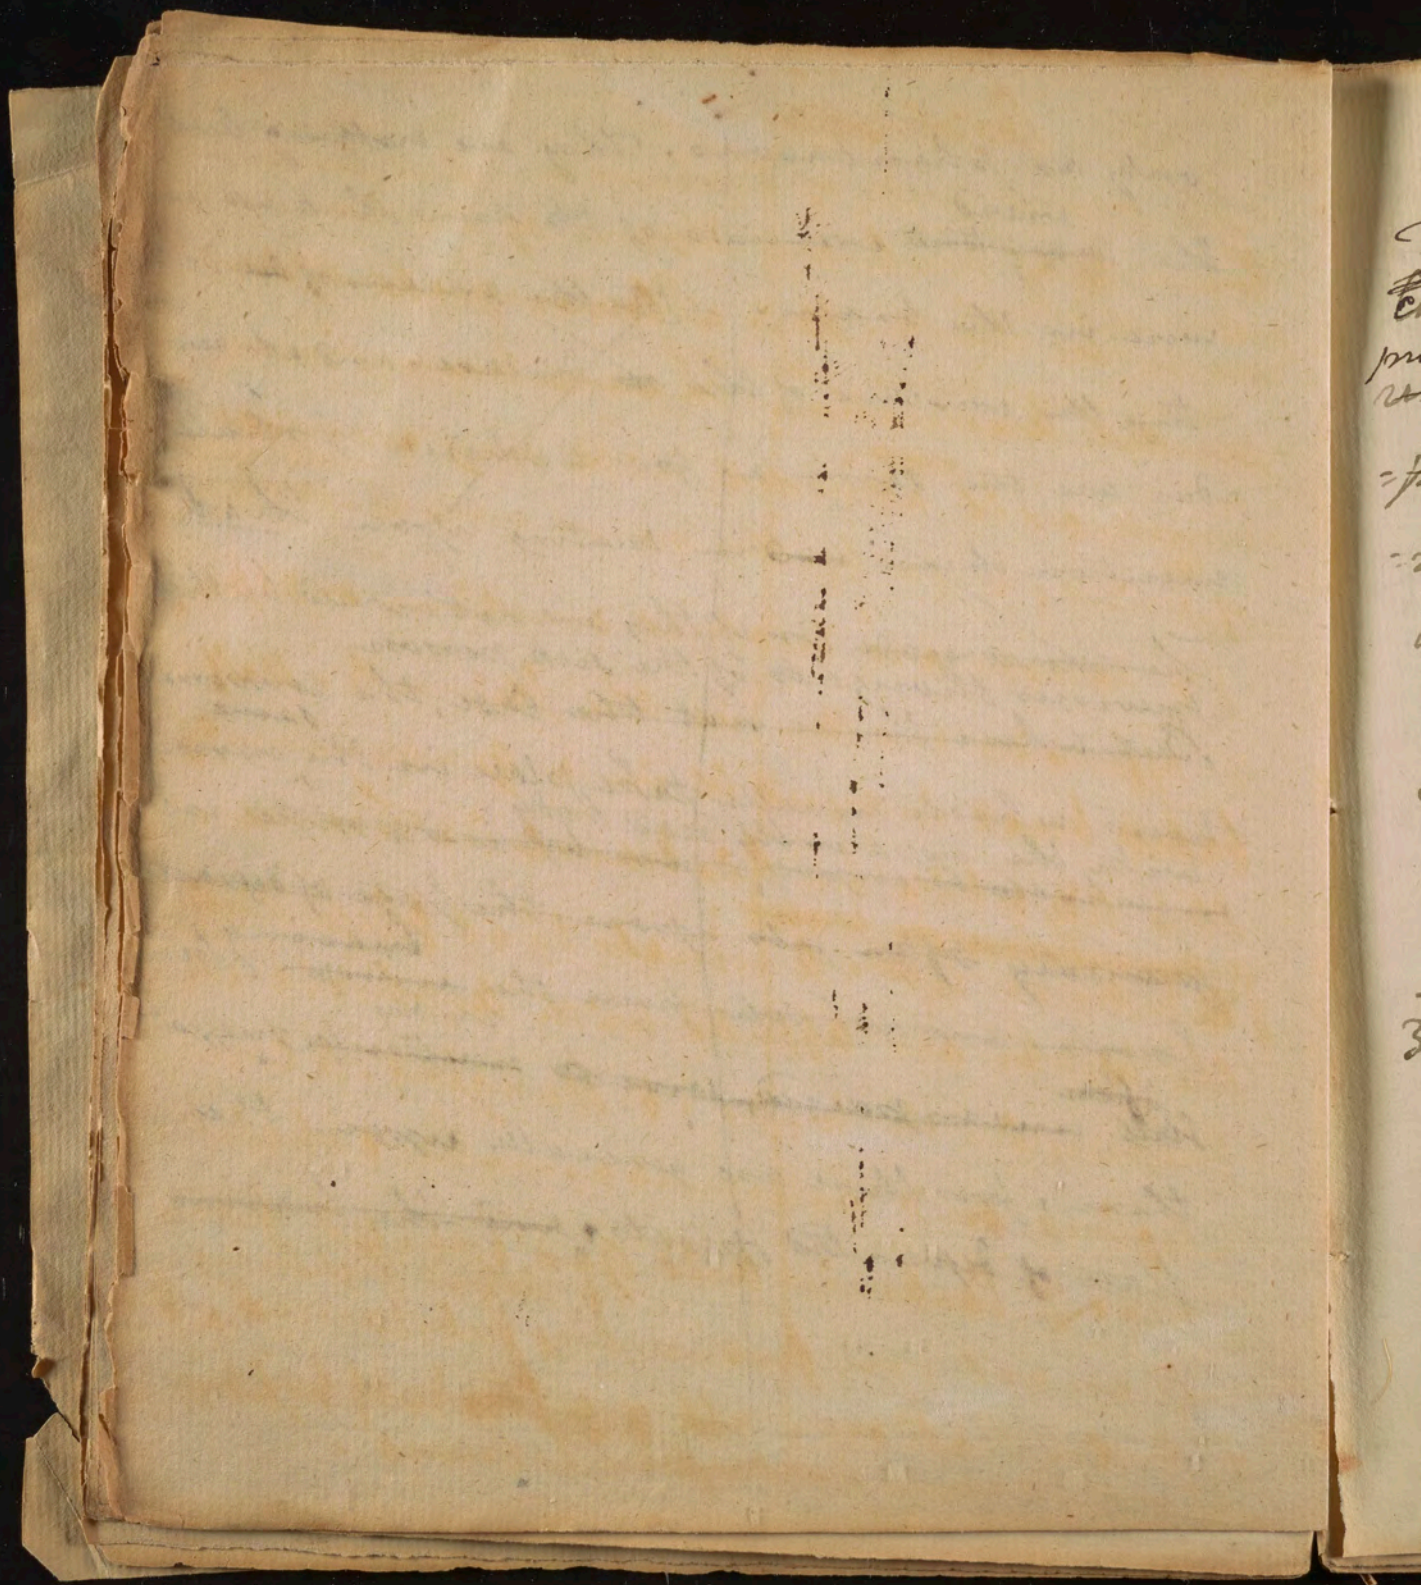

revelations, ~~and which they believe to be realities.~~

~~They~~ what they have dreamt, ~~only~~, or seen ~~as~~

[Faint, illegible handwriting in cursive script, likely a historical document or letter. The text is written on aged, yellowed paper with visible creases and some dark spots.]

only as phantasms. They are nothing but
the ^{vivid} consistent exercises of the mind shut up as
were in the brain. — As the means of dete-
-ting the existence of this ~~is~~ disease, and its reme-
-dis are the same as for Apathy, I shall
mention them ~~and~~ in treating upon that

~~The second mode~~ Or if they are not induced by the
previous thoughts of the sick person
~~But where this is not the case, the conversa-~~
-tions which usually take place in the room
with the apparently dead body, ^{same} are
~~in which a corpse is left is deposited~~
generally often upon the state of departed
spirits, and which from the ^{leaving} ~~unimpaired~~ ^{being}
~~often~~ ^{may} ~~unimpaired, serve to necessarily suggest~~
them, for these are generally upon the
state of departed spirits, ~~and the leaving~~

~~Asphyxia~~

The second grade of Asphyxia ^{but, sensation}
 consists of such an Absence of Motion as to
 produce apparent ~~death~~ ^{death}. It is a lower grade of As-
 phyxia ^{moreover never attended}
~~marked Animation than a trace, viz.~~

~~much as it~~ ^{not} attended with any exercised
 of mind, or if it be, they are not recollected after a ^{recovery.}

Its causes are, violent emotions or passions.
 2 Offensive matters in the Stomach. Half
 baked bread induced it in a Gentleman of

this City while on his travels in France.
~~3 Immersion in water.~~
 3 Intense Cold. Animals that sleep during
 the winter are affected with Asphyxia. 4

Immersion in water. 5 Hanging. 6 Con-
 tagious and noxious aromatic exhalati-
 ons. 7 Carbonic Acid Gas ^{exhaled from}

Charcoal, or fermenting substances. 8

9 Intoxication. ~~10 Stroke of lightning.~~
~~10 Stroke of lightning.~~

V ~~list~~ mention such as proper for
~~them all~~
~~each~~, and then mention the remedies
that are ~~at~~ proper for Asphixia
~~from~~ ^{each of the its} ~~add its~~ Canoco. ~~that have been~~
~~mentioned.~~

In speaking of the Remedies that are proper to cure Asphyxia I shall mention such as are proper in Asphyxia from ~~all~~ its causes generally. I mention such as are proper in Asphyxia from ^{each of} all the causes that have been enumerated.

To the first belong,

1 ~~Placing~~ Placing the body in an easy and natural position, and stripping it of such Clothing and ligatures employed in dress, as may tend to retard the return of life. -

2 warmth and gentle frictions to every part of the body. They should be gentle, or forcible, according to the supposed

✓ This practice is founded upon the
importance of air in beginning &
supporting animal life. —

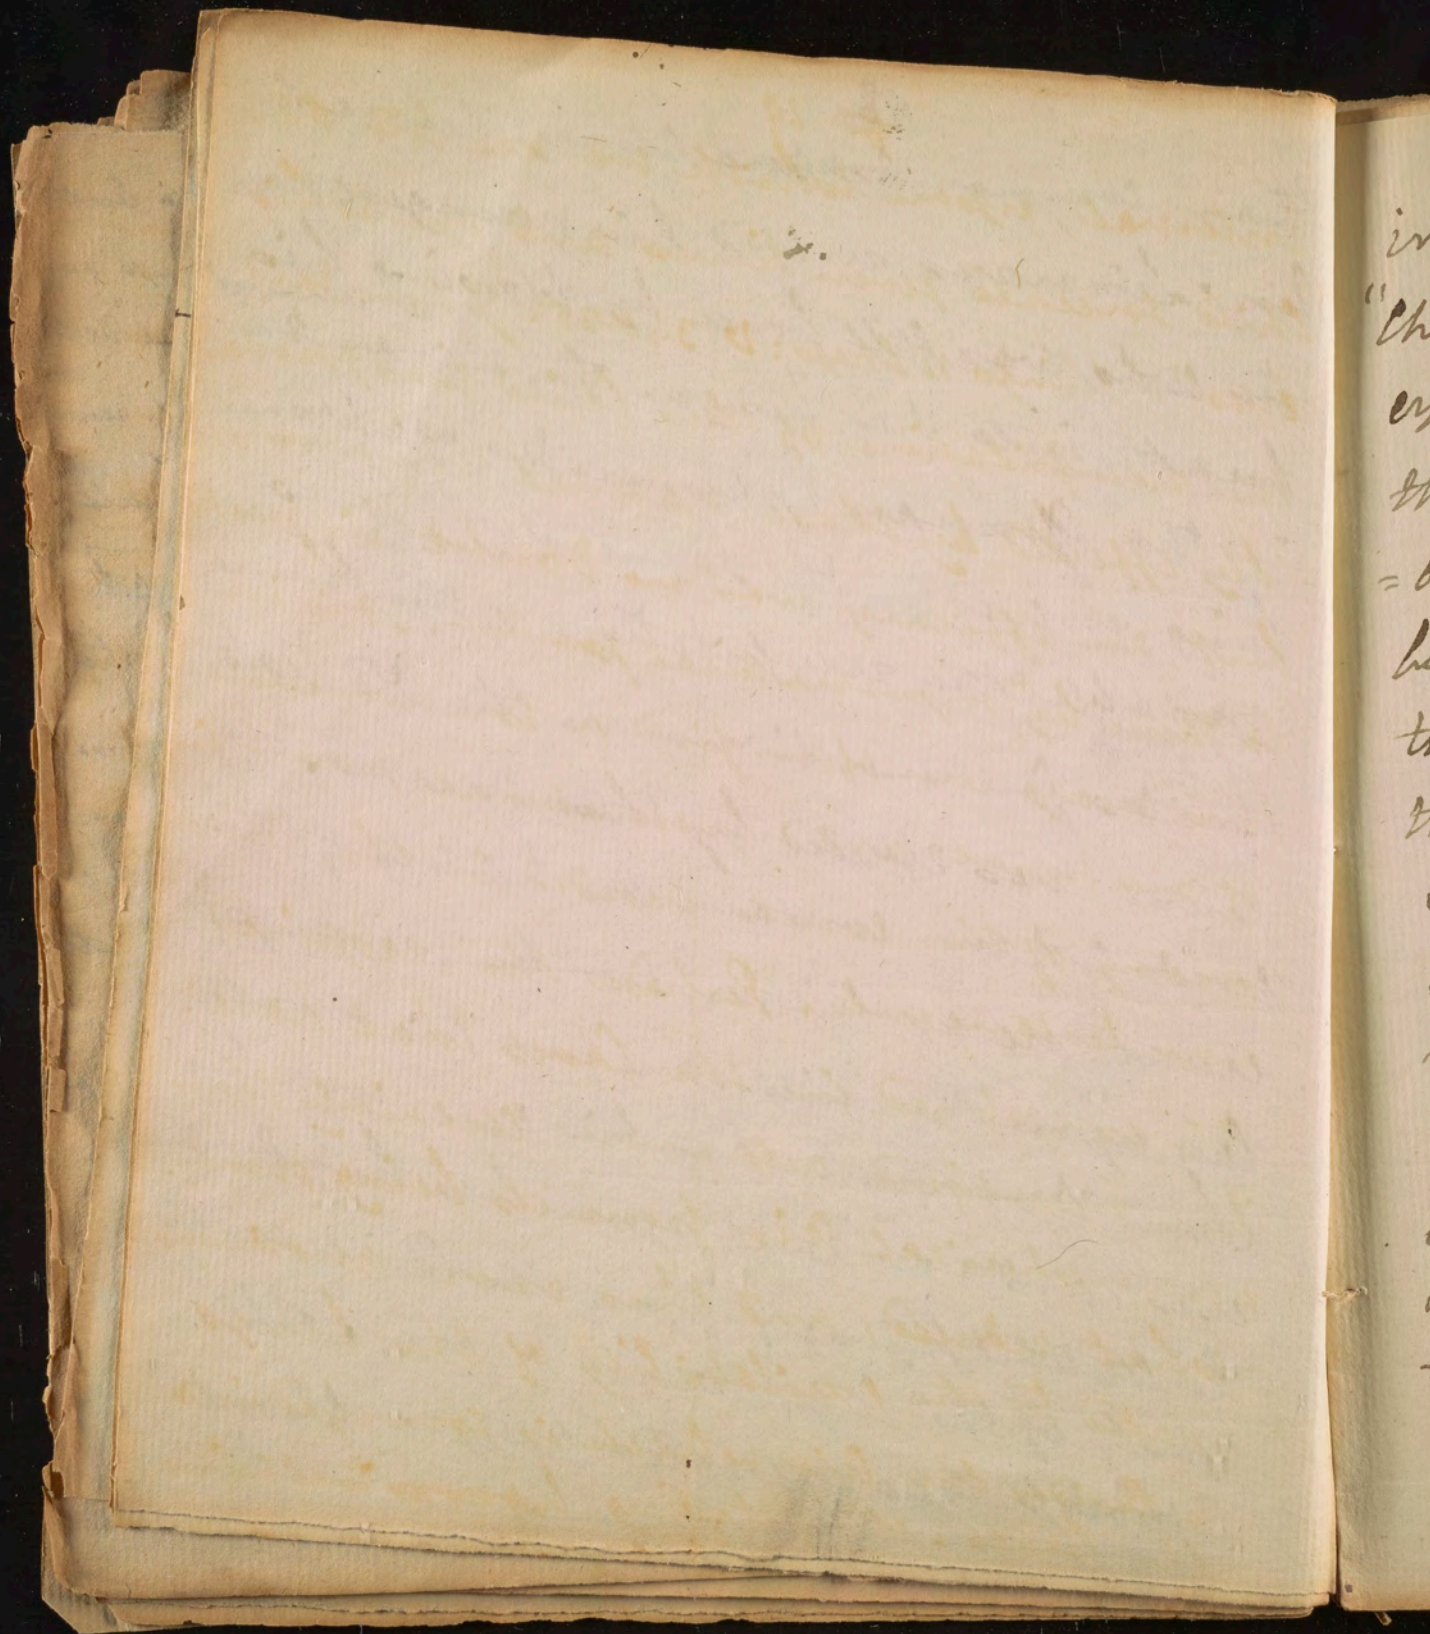

accumulation, or expenditure of the
excitability by the sudden or gradual
suspension of life. ^{they should be} ~~if it be possible~~
gentle in the former, and forcible in the
latter case. —

3 Inflating the lungs with air by
placing the nose of a pair of bellows ~~in~~
in one nostril, and stopping the other.
There are facts which seem to render it
probable that expired air has a greater
power of reviving life when thrown
into the lungs

[Faint, illegible handwriting on aged paper]

th

a
+

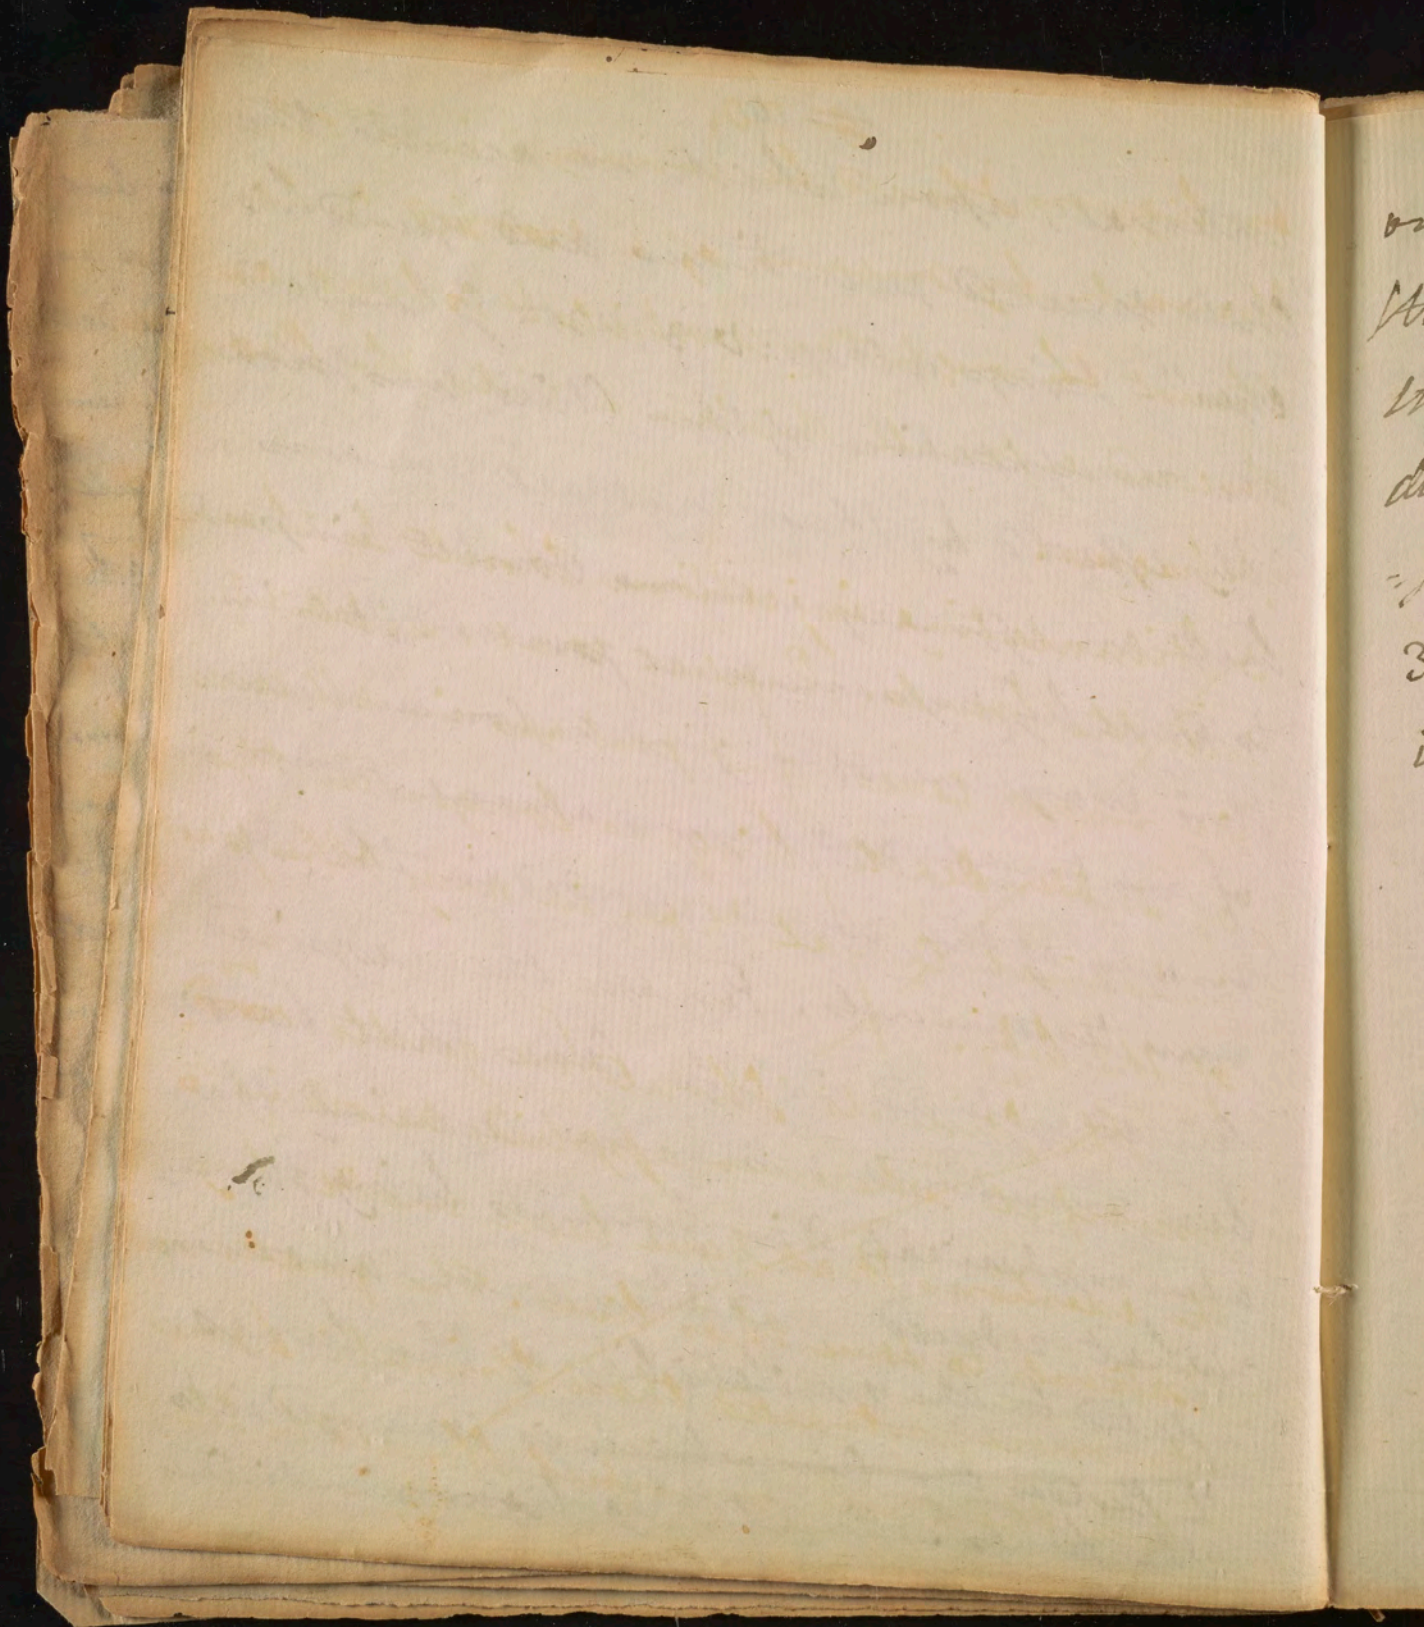

than common ~~captured~~ Atmospheric
 Air. Linnæus revived his youngest Daugh-
 -ter who was still born, by blowing ^{about} his
 breath into her lungs. There is an ~~Act~~
 in the German Ephemerides of a woman
 being revived in the same way. It is
 notable the resuscitation of the Pharaoh
 -mites you mentioned in the Old testa-
 -ment was effected by these means. The
 words which contain the history of this
 event are as follow. "And he went up, &
 lay upon the Child, and put his mouth
 upon his mouth, and his eyes upon his
 eyes, and his hands upon his hands, &
 he stretched himself upon the Child, and the
 flesh of the Child waxed warm." This
 process was repeated after a short

in
"Ch
er
th
= b
be
th
th

19

interval, upon which we are told the
"Child sneezed seven times and opened his
eyes". Kings II Chap: V 34 & 35. I have said
the resuscitation of this Child was proba-
bly effected by these natural means,
but an efficacy was no doubt imparted
to them by ^a supernatural power. It is in
this way we often find a concurrence
of natural and supernatural power in
many of the events recorded in the Old &
New Testaments. Perhaps the resuscited
Air employed in the Cases that have
been mentioned acts more certainly than
atmospherical Air from its being some-
what reduced, and thus more accessi-
-ble to the exhalability of the lungs.
2 Besides the Air which is conveyed into
the lungs, stimulating liquors & medicines,

20.

or liquor should be conveyed into the
Stomach by means of a ~~crooked~~ tube
thrust through the nostrils & so bent as
to descend a small distance into the Oesophagus.

3 Stimulating injections should be thrown
into the bowels. Recollect that excitability
is most cases, and perhaps in all cases
of sudden death, longer in the
intestinal canal than in any other part
of the body.

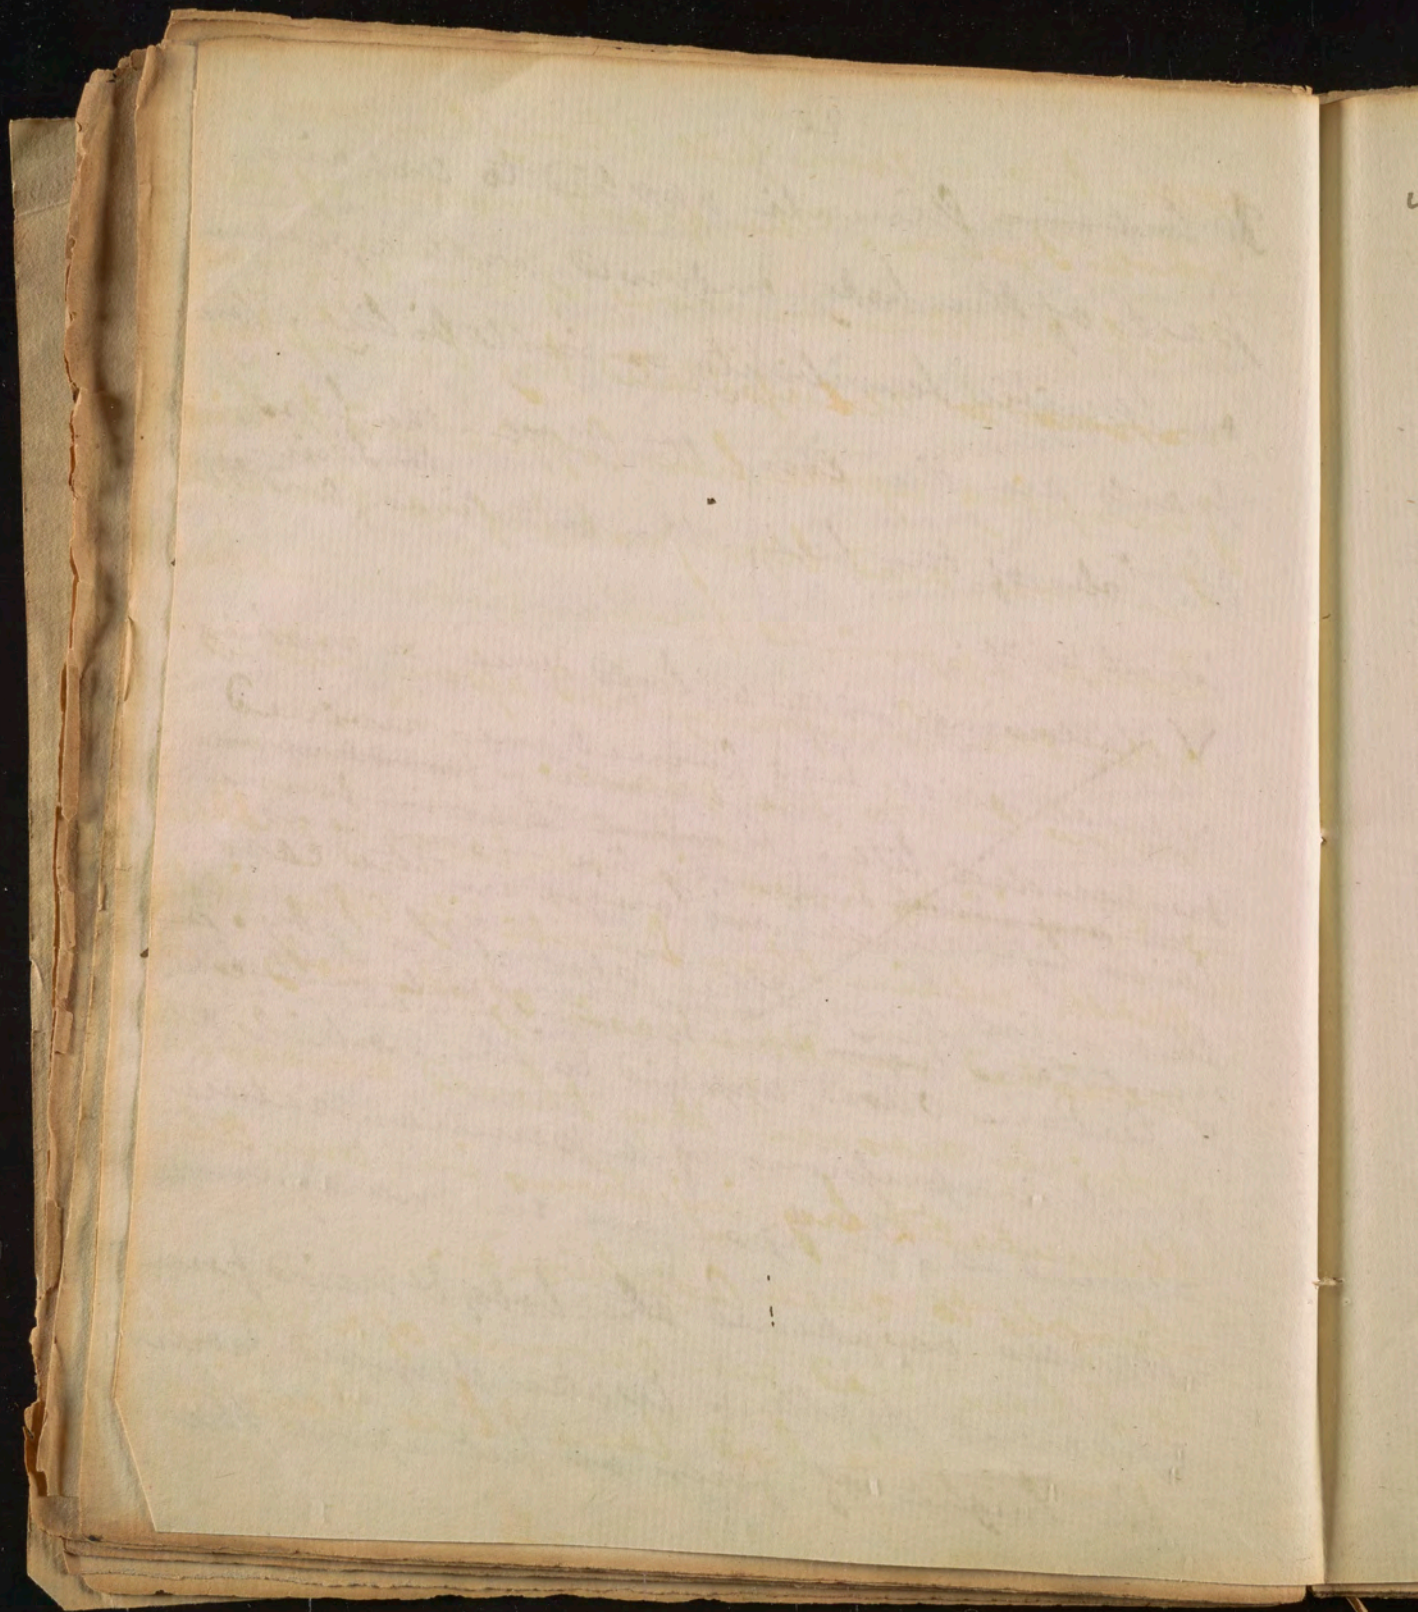

The stimuli should be gentle ^{or} ~~and~~
powerful whenever applied, according to
the exertions that have been made by
patients to save their lives. The greater or
the more protracted those stimuli have
been the more powerful should be the

V

1 Speaking at first in a feeble, and gradually in an elevated tone of Voice in the Ear of a patient, has sometimes revived suspended life. This practice is founded upon the sense of hearing, and the mind being still in a healthy and active state. Talking of the place and time of interring the supposed Dead body revived a former citizen of Philadelphia ~~who was~~ thought to be dead in the Island of Barbadoes, and the singing ^{funeral} a hymn had ^a similar effect we are told by upon the supposed dead body of a young woman in Germany.

& Certain Stimuli applied to certain
 parts of the body endowed with a peculiar
 or specific sensibility or irritability. These
 parts are the ear, - the nose - the lips,
 the soles of the feet - the intestines, ^{the skin -} and the
 wind pipe.

✓ Hallowing with a loud voice, or making
 a great noise has sometimes revived
 suspended life. ^{This practice is ~~proposed~~ ~~approved~~}
~~Recall that in some~~
~~the probability suggested by life in some cases~~
~~cases life reviving longer in the ear~~
~~than in any other part of the body. In~~
~~recent cases it will be ^{beginning} to begin, ^{beginning} in the ear.~~
 & Certain Odors applied to the nostrils, &
 gentle impressions of a peculiar nature
 applied to the lips have in many in-
 stances awakened the body & mind from
 apparent death. Water dropped from
 the height of four or five upon the

22

upper lip is soon felt throughout the whole system. The grand mother of an Irish gentleman now of this city, was ~~removed to~~ resuscitated by her lap dog jumping upon her Coffin and licking her nose, and lips just before her the hour appointed for her interment & after the Company had assembled to follow her to the grave.

3 The intestines in all cases of sudden death retain their sensibility after it has perished in other parts of the body. For which reason, they should always be stimulated by injections in our attempts to cure Asphyxia.

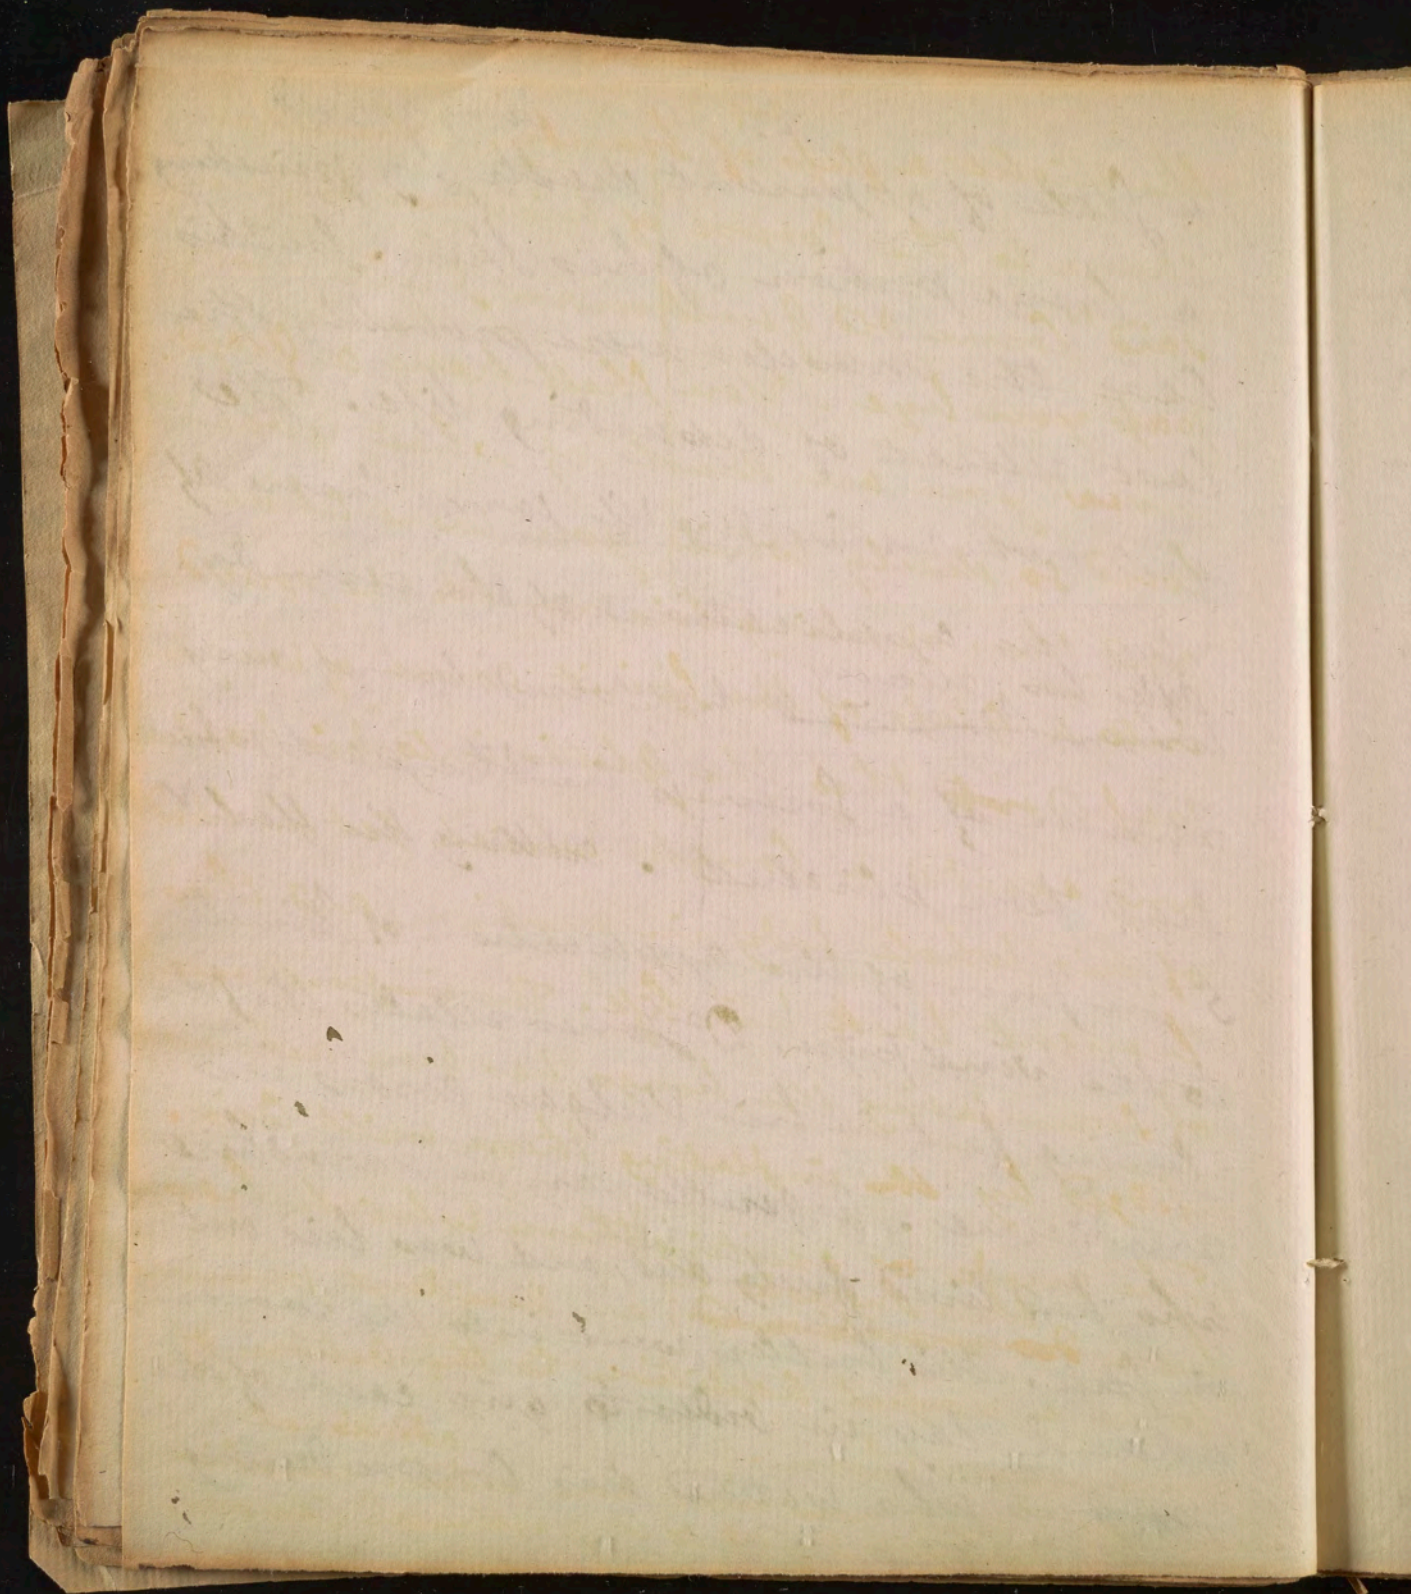

4 I have read an account of a young man, who had lain three days in

✓ Should not be neglected in desperate
cases. ^{This remedy is suggested by the} ~~Recall~~ the Stones that are upon
word of persons discovering signs of life
and were moving afterwards from
the first incision of ^{a digging} ~~a separating~~ knife.

a state of apparent death, by pinching
a large portion of his skin. In this
case the muscles were probably the
last retreat of departing life. He
did not revive until some time af-
-ter the application of the remedy.

After his recovery
~~when he awoke~~, he complained very
much of a soreness in the parts which
had been pinched. cutting the flesh

5 In favor of the application of Stimuli
to the wind pipe. Dr Jones relates the fol-
-lowing fact in his Vulgar errors in
medicine. A gentleman in Devonshire
who had lived freely died, and was laid out
in state. His butler went into the room
where he lay in order to give each of the
persons who watched his Corpse during

24
the night a glass of brandy. When he
came to the Corpse of his master, he
said "Come old Quilbourn I will not
pass you by. You shall have a glass
now you are dead, of what you
loved so dearly while you were alive"
and then opening his mouth, he poured
into ^{it} a glass of the Spirit, some of which
passed ~~into~~ thro' the Glottis into his trachea
and excited a Cough which set the blood
of his whole body in motion, and thus
brought back his life. The importance
of stimulating the lungs has been acknow-
ledged by ~~the~~ inflating them with Air.
The mode of exciting them which has
been ~~proposed~~ ^{suggested by} an Accident, promises
to be a useful Addition to the Action of
Air upon them. ^{additional}
I shall now mention certain remedies
for Asphyxia suited to its particular Causes.

[Faint, illegible handwriting, likely bleed-through from the reverse side of the page.]

The Remedy for Asphyxia should be different according to its Cause. I shall

1 When it arises from violent emotions or passions of the mind, or from ~~offensive~~ ^{offensive} matters in the stomach, the stimulus from there should be opposed by more powerful stimuli applied to every sensible external part of the body, & to the bowels by means of injections.

— Boiling water applied to the head & breast, promises more immediate relief than any other stimulus, & should by all means be used.

2 In Asphyxia from ^{the remedy} Cold should be the gradual application of warmth a few degrees above the ~~the~~ temperature of the body, and its gradual increase afterwards.

✓ or of a longer time floats upon the
Surface of the water.

In Asphyxia from Drowning, the remedies
 should be with all those which have been
 mentioned, the extraction of water from
 the lungs by means of an instrument
 contrived by Dr Goodwin for that purpose.
 The ^{Doctor} has proved however that death
 from Drowning is not induced by this water,
 but by the want of ~~any oxygen~~ the usual
 stimulus of oxygen upon the lungs.

It has often been asked,
~~It has sometimes been asked, why a~~
 body which has been drowned, first sinks and
~~aff afterwards in the course of a day or two, or even floats~~
~~then floats.~~ To this question I answer, - the
 body in its first immersion, contracts from
 terror or fear at which time it becomes ^{specifically}
 heavier than the water. When these contractions
 are relaxed, the body rises & floats upon
 the surface of the water from its specific

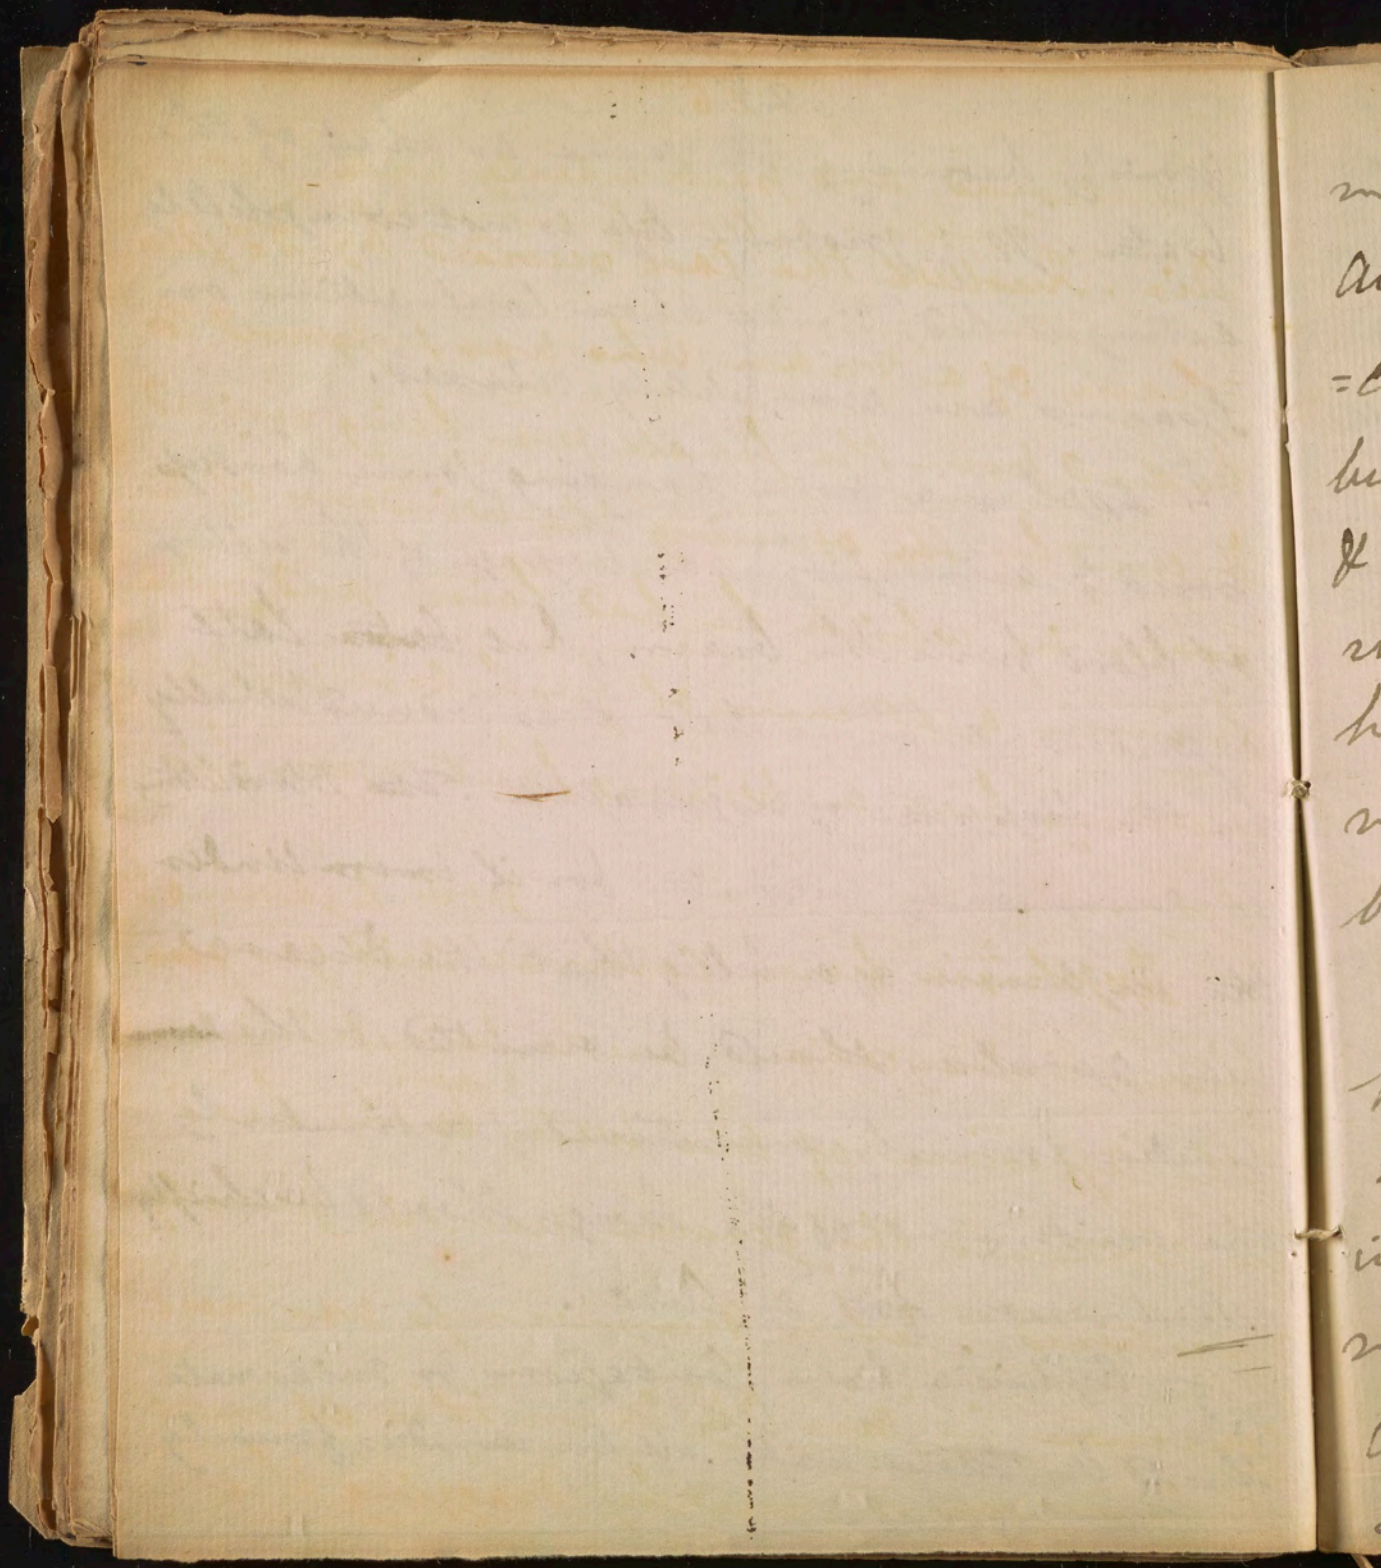

[Faint, illegible handwriting in cursive script, likely a historical document or letter.]

gravity becoming the same as that of the water. It is probable life is not completely extinguished, until those contractions on Spasms are completely relaxed.

4 Asphyxia from hanging same has sup-
posed to arise from a stoppage of the reflux
of blood from the brain, but ~~later~~ late
experiments prove that it is induced wholly
by the stoppage of respiration. The Bloodletting
so commonly prescribed for it ~~is~~ under
the influence of a belief that the disease
was Apoplexy, should be omitted, & the ~~same~~
remedies formerly mentioned, particularly
the excitement of the lungs should be chiefly
relied upon for a cure.

5 Asphyxia from Contagious or miasmatic
should be treated with all the remedies formerly

mentioned, and particularly with fresh
 Air. ^{Its efficacy is strongly enforced by} ~~Recall~~ the case recorded by Dr Syden-
 =ham of a man who was supposed to
 be dead from the small pox being revived
 & cured by the opening the windows of the
 room in which he had lain, and placing
 him in a stream of fresh air with
 nothing but a winding sheet upon his
 body.

from lightning &
 6 Asphyxia from Carbonic Acid Gas, ~~also~~
 from intoxication, are to be relieved by
 the affusion of cold water ^{upon} ~~to~~ the head
 in addition to the general remedies formerly
 mentioned. When Drunkenness was more
 common in our City than it is at present,
 I have seen it cured by dragging the

~~fact of Sprinter's~~ ~~in~~ ~~for~~ ~~and~~ ~~of~~ ~~all~~
the ~~muscles~~ ~~of~~ ~~the~~ ~~body~~; ~~by~~ ~~the~~ ~~factor~~ ~~which~~ ~~accompany~~
~~and~~ - ~~by~~ ~~the~~ ~~factor~~ ~~which~~ ~~accompany~~
~~is~~ ~~accompanied~~ ~~with~~ ~~obvious~~ ~~marks~~
~~of~~ ~~putrefaction~~. ~~I~~ ~~am~~ ~~indebted~~ ~~to~~ ~~a~~ ~~good~~
housewife for this ~~last~~ ~~mark~~ ~~of~~ ~~death~~.
A fowl is never fit for the ~~table~~ until
~~these~~ ~~marks~~ ~~have~~ ~~appeared~~ ~~these~~ ~~marks~~ ~~should~~
~~be~~ ~~continued~~ ~~for~~ ~~some~~ ~~time~~, ~~for~~ ~~this~~ ~~this~~
factor has sometimes taken place in man-
- ~~before~~ ~~death~~. ~~Dr~~ ~~John~~ ~~Pringle~~
~~has~~ ~~noticed~~ ~~it~~. ~~I~~ ~~have~~ ~~once~~ ~~seen~~ ~~it~~ ~~in~~
place ~~young~~ ~~Warran~~ ~~in~~ ~~this~~ ~~city~~ ~~take~~ ~~place~~
in whom this factor was very perceptible;
for which reason all the marks of death
interment should always be delayed.

27
patient to a pump & pumping water
upon his head for ten or fifteen minutes.
The cure has been so complete by this
remedy, that the patient has walked home
without staggering from the place where it
was used.

~~Asphyxia from lightning has been used~~
~~in insensibility by the~~
recovery from

In ~~all~~ cases of Asphyxia, the system
^{sometimes} reacts with so much force as to
require bleeding. This should never be
omitted when indicated, - ^{from} neglecting it,
chronic diseases & death have sometimes
followed an ^{supposed} ~~apparent~~ cure of apparent
death.

The signs of death 1 a Clamminess of
the ^{skin} 2 an acid, or an alkaline odor, and
3 a ~~not~~ total relaxation of the Spincter Ani. ✓

not only in all the common cases of

1. Suspected cases of Asphyxia, ~~until the factor~~
has continued for some time and is obvious

upon every part of the body, ~~but in all cases~~
~~in which death has occurred suddenly, or~~
~~of sudden death, and in most cases of death~~
~~the transition has been sudden from apparent health~~
~~from acute diseases which have occurred~~
~~or in acute diseases to death, and in all acute~~
~~diseases in which it has taken place~~
~~signs of asphyxia, in acute diseases such~~

as fainting, a long choking, a suspension
of breathing ^{and the like} should instantly take place
until ~~or~~ without the usual signs of asphyxia,
such as fainting, choking, suspension
of respiration, and extreme pain; intervention
should be delayed until the factor
has continued for some time, and is
obvious upon every part of the body.
